

SurfControl Web Filter for Novell BorderManager 6.0

README

WELCOME

This release can be installed as a fresh install or as an upgrade to SurfControl Web Filter for Novell BorderManager 5.0. You need to be running Novell BorderManager 3.7 SP3 or 3.8.

This release contains 2 components:

SurfControl Content Database: NetWare based list of SurfControl categorized URLs. This list is used within BorderManagers Access Rules.

Monitor & Reporter: SurfControls standalone, Windows 2000/2003 based product that monitors all web traffic and produces graphical reports.

There are 3 documents to help you install and manage Internet access using SurfControl.

SurfControl Web Filter Administrator's Guide: This explains the full functionality of the standalone SurfControl Web Filter. For BorderManager users please ignore any sections discussing rules administration. You will be creating rules using BorderManager.

SurfControl Web Filter Installation Guide: This explains how to install the standalone SurfControl Web Filter.

SurfControl Content Database Administrator's Guide: All issues specific to SurfControl Web Filter for Novell BorderManager customers.

INSTALLATION

Please refer to the SurfControl Content Database document for full installation instructions. This is available from the support area of <http://www.surfcontrol.com/> and on the product CD.

NEW FEATURES

40 Categories of web sites

Previous versions provided 30 categories of URLs for inclusion in Novell BorderManager rules. This release contains 40 categories.
