Upgrading the data endpoint from v7.8.x to v8.0.x

Review the v8.0 Release Notes prior to upgrade

START

My Data Security deployment is currently functional

NO

YES

Unless otherwise instructed by Technical Support, please ensure your system is functional prior to upgrading, then return here

I have already upgraded the Data Security management server to v8.0.x

NO

YES

On the management server, open the Start menu and select Programs > Websense > TRITON AP-DATA > Endpoint Package Builder

You must first upgrade the Data Security management server to v8.0.x. A flow chart for upgrading the management server is located in the Upgrade Center:

http://www.websense.com/content/8-upgrade-center.aspx

After the manager upgrade is complete, return here

Select "TRITON AP-ENDPOINT DLP"

(Cont.)
Choose Windows 32- or 64-bit when prompted

Deploy the v8.0.x package to each endpoint using GPO, SMS, or a similar deployment method. You can install v8.0.x on top of earlier versions without uninstalling and re-installing them.

Is your endpoint running on Windows, Linux, or Mac? Note: You can select multiple operating systems, and separate packages will be created

Select Mac OS X when prompted

Unzip the WebsenseEndpoint.zip package onto your Mac system and run WebsenseEndpoint.pkg

Follow the steps in the installation wizard

Choose Linux when prompted

Copy the installer LinuxEndpoint_SFX_installer_el 5 to the machine and run it as root. You can install v8.0.x on top of older versions without uninstalling and re-installing them. When the upgrade is complete, the endpoint software starts automatically. No reboot is necessary.

Restart the endpoint after installation is complete

Congratulations! Data endpoint upgrade complete

End users may be prompted to log off and back on to their desktops

END
