

# IS YOUR ORGANIZATION READY FOR MARCH 12, 2014?

**Find out with a FREE Privacy Act Impact Assessment.**

On March 12, 2014, the Australian Privacy Amendment Act 2012 goes into effect. It replaces the existing National Privacy Principles and Information Privacy Principles with 13 Privacy Principles. The act will apply to all Australian organizations and government agencies.

Understanding what personal and sensitive information organisations have, where it is stored, how it is managed and how it is shared is a complex process that requires expert advice and experience.

There are many ways to address this, most of which can impact productivity, provide limited success and require considerable time and resources to implement.

## A Websense Privacy Act Impact Assessment can help.

### The Service

With a Privacy Act Impact Assessment, Websense focuses on identifying personal and sensitive information within your business. Data is analyzed in storage, and as it enters, moves around and leaves the network so you can quickly assess potential Privacy Act breaches within your data repositories, or over the web or email channels. Websense works with your organization to identify personal information data types and build policies to suit your requirements.

### Data Review

Following the assessment and monitoring phase, our security consultants analyse the data and provide a report detailing all instances of personal and sensitive data triggered by the configured policies. This is presented to the business along with a recommended remediation plan that includes potential Privacy Act breaches.

**Request your free impact assessment today  
and be prepared for the March 12 deadline.
