TRITON™

Greg Didier

- Title:
 - Support Specialist
- Accomplishments:
 - 9 years supporting Websense products
- Qualifications:
 - Technical Support Mentor
 - Product Trainer

- Directory synchronization
- Administering policies
- Working with user accounts
- Working with blocked sites
- Popular reports
- Best practice tips

- Directory synchronization, self-registration, invitation or bulk end user upload
- To view and manage end users globally
 - Account Settings > Settings > End Users > Search

The screenshot displays the Websense TRITON Cloud Security management console. The top navigation bar includes 'Home' and 'Web Security' buttons, and a user profile for 'TS Webinar (Websense, Inc.)' with a 'Log Off' link. A red box highlights the 'Account Settings' button in the top right. The left sidebar shows a menu with 'Settings' expanded, and 'End Users' selected. The main content area is titled 'End Users' and contains a 'Search End Users' section. A red box highlights the table of end users. The table has columns for Name, Email, NTLM ID, and Web policy. Below the table, a note states: '* These policy assignments are explicitly set.'

<input type="checkbox"/>	Name	Email	NTLM ID	Web policy
<input type="checkbox"/>	CloudAdmin	CloudAdmin@webinar.net	webinar\cloudadmin	Default
<input type="checkbox"/>	Erika Goodman	egoodman@webinar.net	webinar\egoodman	Default
<input type="checkbox"/>	Erika Goodman	egoodman1@webinar.net	webinar\egoodman1	Default
<input type="checkbox"/>	Joe Smith	jsmith@webinar.net		Default*
<input type="checkbox"/>	webinar\wbsn	webinar.wbsn@34259-38029-nosuchdomain.autoregistration.proxy	WEBINAR\wbsn	Default*

- Cloud portal
 1. Add a directory synchronization contact
 2. Assign directory synchronization permissions
 3. Enable directory synchronization
- Your network
 1. Devise a synchronization strategy
 - Only push up (synchronize) useful group or user objects
 - Eliminate/reduce synchronizing unnecessary objects
 2. Install the Directory Sync Client application
 3. Configure the Directory Sync Client
 - Test before synchronizing to the Cloud service
- Demonstration

- Best practice
 - Create a contact specifically for directory synchronization
 - Reduces a password change issue
 - Synchronize only useful group and user objects
 - Only one Directory Synchronization Client instance
 - Schedule two directory synchronizations a day
 - Only one Configuration Profile
 - To synchronize *group members* and *individual users accounts*, use multiple Data Sources
 - First Data Source (*group members*)
 - *Groups > Filter Users > Do Not Filter*
 - *Users > Find Users By > Group Membership*
 - Second Data Source (*individual users*)
 - *Users > Find Users By > Searching The Directory*

- Typically, a single policy is sufficient
 - Exceptions eliminate the need for multiple policies
 - When should you create a new policy?
- Policy assignment methods
 - Defined Proxied Connection
 - Remote (undefined location)
 - Policy-Specific PAC file
 - Synchronized user/group with a policy assignment
 - Synchronized users without a defined policy
- Demonstration
 - Action precedence
 - Allow access > block access > do not block

- Proxied Connection
 - Definable IP address within each policy
 - Web Security > Policy Management > Policies > Connections tab
- Remote connection (undefined location)
 - Web requests come from an unknown IP address
 - Remote users self-register with their email address
 - Web Security > Settings > Domains > your domain > Associate...
 - Select a policy to associate with remote users
- Policy-Specific PAC file
 - Web Security > Policy Management > Policies > Policy name > General tab
 - Every policy has an unique PAC file identifier
- Synchronized users/groups with an assigned policy
 - Account Settings > Settings > Directory Synchronization > Web
 - User or group objects are assigned to a policy
 - Fixed or follow group membership
- Synchronized users without an assigned policy
 - Account Settings > Settings > Directory Synchronization > Web
 - Assign users to this policy if they have no group-based policy...

- **Account level**
 - **Contacts tab**
 - Create portal management contacts and assign permissions
 - Not for adding end user accounts
 - **End Users tab**
 - Global search within all policies
 - Change Web policy, enable/disable Web access, set password
 - **Groups tab**
 - Displays all groups and their associated users
 - Create a local Web portal group
- **Policy level > End User tab**
 - **User Management**
 - User search within policy
 - Change Web policy, enable/disable Web access, set password
 - Add and invite users
 - **Directory Synchronization (Groups)**
 - Displays groups, associated users and assign a group to policy
- **Demonstration**

- Exceptions
 - Overrides default policy settings
- Category block
 - Allow access, Do not block, Require user authentication, Confirm, Use Quota
- Content Security analysis exception
- Authentication block
 - Access Control
- Bypassing security and authentication checks
 - Authentication, endpoint, certificate verification
 - Web Security > Settings > Bypass Settings
- Demonstration

- Reports provide security and usage feedback
 - Home > Reports
 - Account summary and synchronization reports
 - Web Security > Reports
 - Volumes, Browsing Times, Real Time Scanning, Authentication, Web 2.0 Applications, Protocols, and Endpoint
- Popular reports
 - Volumes > Volumes by User
 - Browsing Times > Browsing Times by Site Demonstration
 - Authentication and Endpoint > Authentication Methods Summary
 - Authentication and Endpoint > Installed Endpoint Summary

- Cloud service identifies users by their email address
- Remote users start off as unidentified
 - Originate from an unrecognized site
 - Unknown source IP address
- Registering users
 - Register by invitation
 - Bulk register end users
 - End user self-registration
 - The email domain component identifies your customer account
- Directory synchronized users do not need to register
 - Exception: They must self-register when traveling
- Remote users are transparently identified when using Endpoint Client

- Tip
 - Expect some latency, policy changes take several minutes to update across all Cloud Security data centers

Webinar Update

Title:

Quick Start 7: Websense® Cloud Web Security:
Troubleshooting and Best Practices

Date:

June 19th, 2013

Time:

8:30 A.M. PST (GMT -8)

How to register:

www.websense.com/content/SupportWebinars.aspx

- Websense Training Partners offer classes online and onsite at your location.
- For more information, please send email to: readiness@websense.com
- To find Websense classes offered by Authorized Training Partners in your area, visit: www.websense.com/findaclass

Websense Customer Training

Designed for:

- ▶ System administrators
- ▶ Network engineers
- ▶ Other members of your organization as appropriate

Training locations:

All training is conducted at Authorized Training Centers (ATCs). Each ATC has information on costs, course schedules, and types of classes (in-person, virtual, or computer-based).
