

Quick Start Guide Websense i-Series Appliance (not applicable to the i-Series virtual appliance)

Web Protection Appliance

⚠ Before you begin...

- Determine appliance rack location.
- Determine appliance IP addresses for network deployment.
- If you plan to use Active Directory authentication, see the Help topic titled System information or the Getting Started Guide for appliance hostname requirements.
- The appliance ships with a pre-installed Web category database. After appliance registration, an update to this database is initiated. During this update, the appliance can analyze traffic using the pre-installed database. Note that traffic analysis may be more accurate after the update is complete.
- For networks with a firewall, open destination UDP port 123 and select the appropriate TCP ports to open for cloud communication: standard (80, 443) or alternative (8081, 8002, 80, 443). See the Getting Started Guide for details.
- If you plan to control VLAN traffic in your network, see the Getting Started Guide for information about VLAN tags.

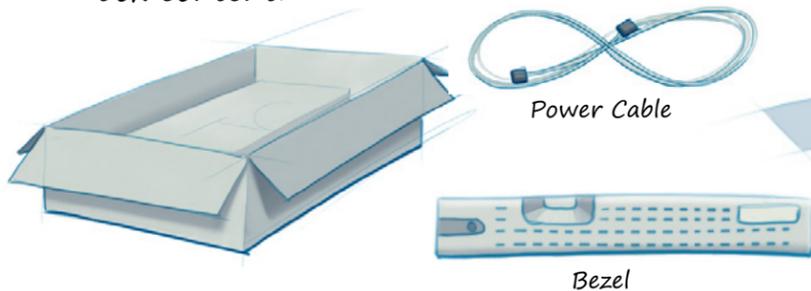

1 Initial Websense Cloud Service Settings

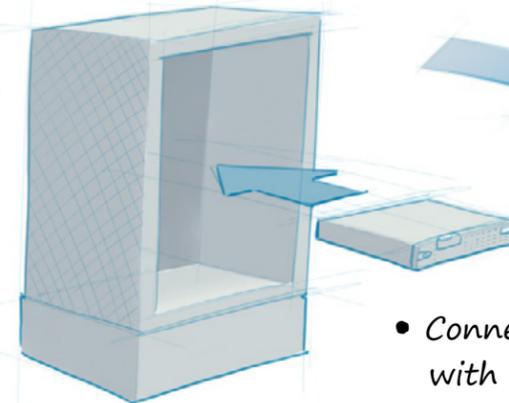

- Ensure that your Websense cloud service account is established and that you have performed your first directory synchronization.
- Log in to the cloud service portal: <https://admin.websense.net/portal>
- In the Cloud TRITON Manager console, click Network Devices and enter new appliance information.

2 i-Series Appliance Setup and Configuration

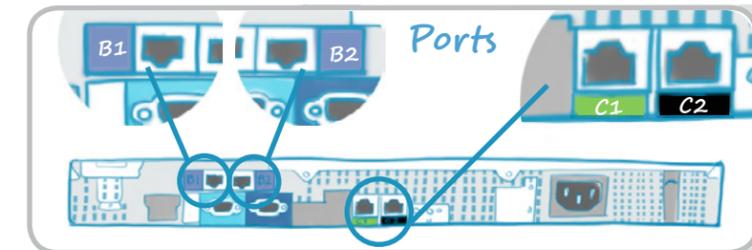

- Verify accessory box content.

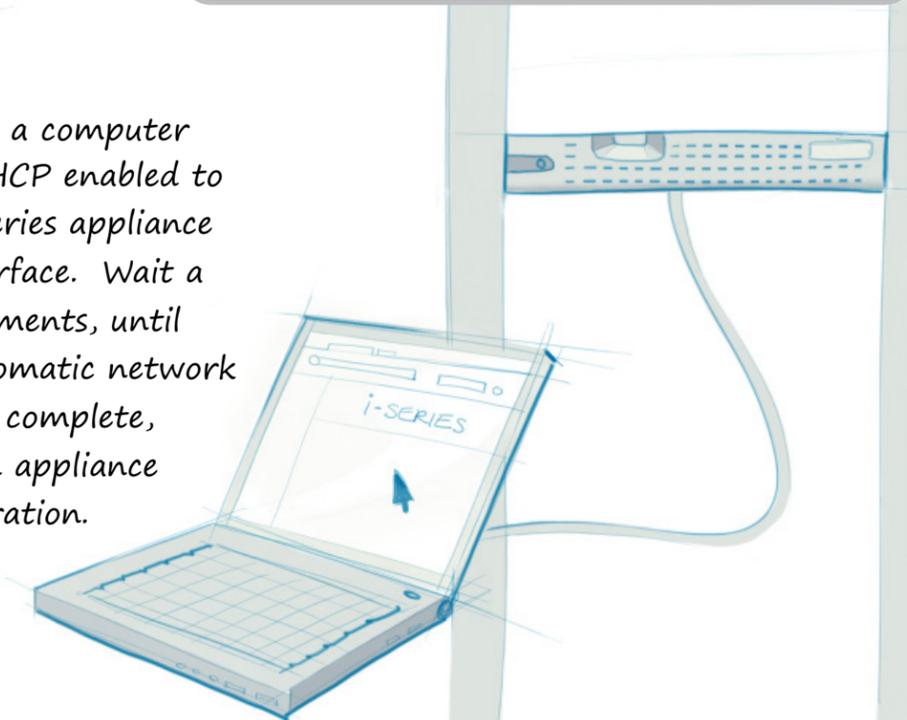

- Rack the appliance and plug it in.
- Power the appliance on and allow the boot sequence to complete.

- Connect a computer with DHCP enabled to the i-Series appliance C1 interface. Wait a few moments, until the automatic network setup is complete, to begin appliance configuration.

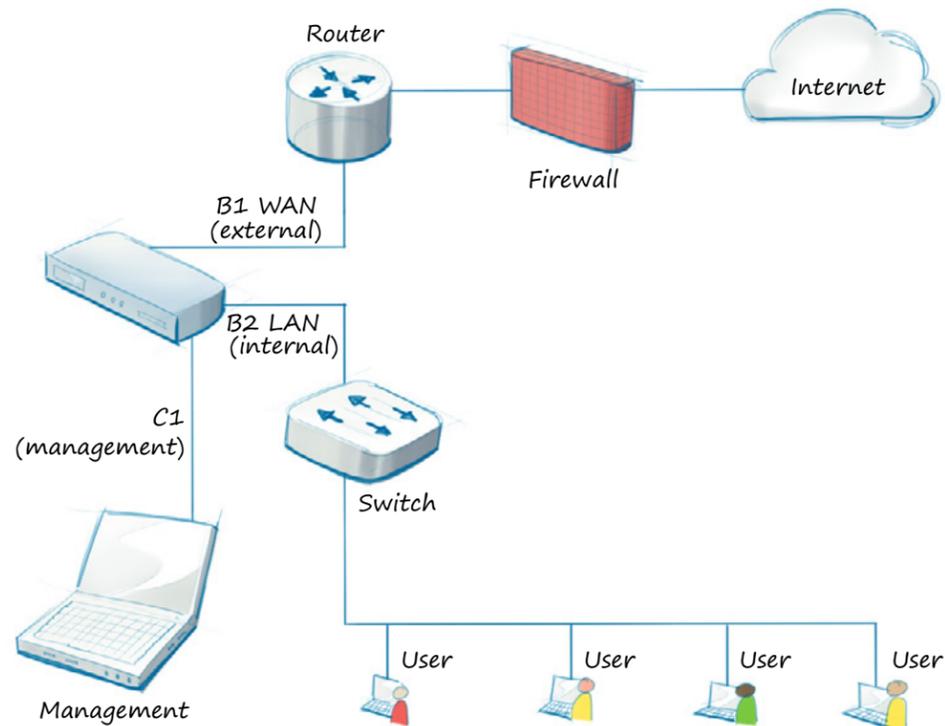

- Log in to the appliance via a web browser connection (<https://169.254.0.2>; credentials are admin/admin)
- Complete the i-Series appliance First-Time Configuration Wizard.
- Log off the appliance and disconnect the computer from the appliance.

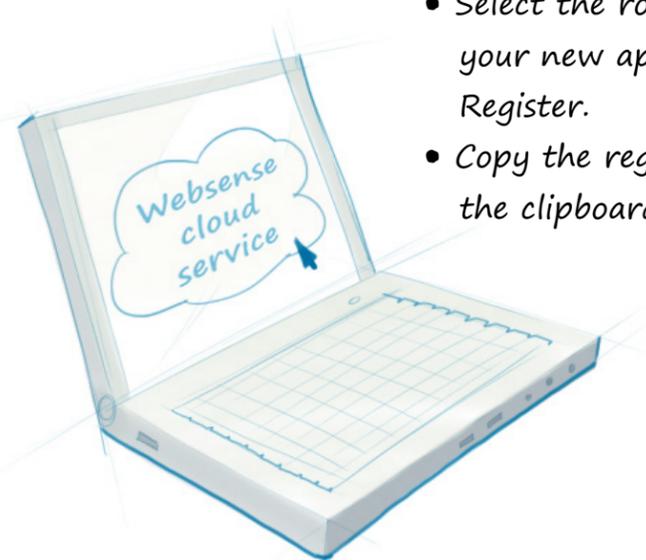

Continued On Back

3 Connect the Appliance to Your Network

4 Appliance Registration

- In the Cloud TRITON Manager console, click Network Devices.
- Select the row that contains your new appliance and click Register.
- Copy the registration key to the clipboard.

5 Registration Completion and Password Change

- Reconnect to the appliance using the management IP address (C1) or the default address (169.254.0.2) and log in.
- Change the appliance password if you have not already done so.
- Paste the cloud service registration key into the Registration Key field.

The Web category database update begins automatically. The appliance can analyze traffic during the update using a pre-installed database. Traffic analysis may be more accurate after the update is complete.

You Are Done!
