

Upgrading the data endpoint from v7.7.x to v7.8

Review the v7.8 Release Notes prior to upgrade

BEFORE UPGRADE

Choose Windows 32- or 64-bit when prompted

Deploy the v7.8.x package to each endpoint using GPO, SMS, or a similar deployment method. You can install v7.8.x on top of earlier versions without uninstalling and re-installing them

Restart the endpoint after installation is complete

Is your endpoint running on Windows, Linux, or Mac? **Note:** You can select multiple operating systems, and separate packages will be created

Windows

Mac

Linux

Choose Linux when prompted

Copy the installer **LinuxEndpoint_SFX_installer_el5** to the machine and run it as root. You can install v7.8.x on top of older versions without uninstalling and re-installing them. When the upgrade is complete, the endpoint software starts automatically. No reboot is necessary

Congratulations! Data endpoint Upgrade complete
END

Select Mac OS X when prompted

Unzip the WebsenseEndpoint.zip package onto your Mac system and run **WebsenseEndpoint.pkg**

Follow the steps in the installation wizard

End users may be prompted to log off and back on to their desktops
