

Upgrading supplemental TRITON AP-DATA servers and standalone agents to v8.2.x

Review the v8.2 Release Notes prior to upgrade

BEFORE UPGRADE

Go to the Downloads tab of mywebsense.com to download the TRITON Unified Installer. The installer file is **TRITON82xSetup.exe**. Installer files occupy approximately 2 GB of disk space

Launch the installer on the machine hosting your server or agent software. A progress dialog box appears, as files are extracted

The wizard appears. Click **next** until you complete the wizard. All v7.8.4, 8.0.x, and 8.1.x Data Security components found on this machine are upgraded

After the upgrade has successfully completed, deploy the agents and supplemental servers by logging on to the TRITON console, selecting the **Data** tab, and clicking **Deploy**

Wait 30 minutes, then route traffic through the upgraded system. If you do not wait for an adequate period of time, you may experience false positives and negatives, as well as discovery errors

Upgrade any other standalone agents and supplemental servers using the same instructions as above

Finally, upgrade any other Data Security components in your network, in the following order:

- Protectors and mobile agents
- Endpoints

Flow charts for upgrading Data Security components can be found in the [8.2 Upgrade Center](#)

END
