New in TRITON AP-DATA Email Gateway

Release Notes | TRITON AP-DATA | v8.3.0 | 24-Apr-2017

Version 8.3 of TRITON AP-DATA Email Gateway offers the following new features:

- *New appliance architecture*
- *Updated operating system*

New appliance architecture

In version 8.3, the Forcepoint V-Series appliance on which TRITON AP-EMAIL runs was re-architected for enhanced performance. The new 64-bit container-based appliance uses a command-line interface (CLI) for individual appliance management.

The TRITON AP-DATA Email Gateway virtual machine (VM) is built upon the TRITON AP-EMAIL appliance architecture, so it will benefit from the same performance benefits. The appliance CLI is used behind the scenes for the Email Gateway VM, so it is not visible or used by TRITON AP-DATA administrators.

Updated operating system

TRITON AP-DATA Email Gateway now includes 64-bit CentOS 7.2. This update improves performance and security of the VM and allows it to use software containers. Containers allow you to run the VM and its dependencies in resource-isolated processes for peak efficiency.

Installation and Upgrade

Installation/Upgrade

Because of the new appliance architecture, you must perform a fresh installation and manual re-configuration to use Email Gateway v8.3. You cannot upgrade from an earlier version.

A step-by-step guide, Installing TRITON AP-DATA v8.3.x, is available online.

Backward compatibility

TRITON AP-DATA Email Gateway v8.3.0 requires a v8.3 TRITON management server. You cannot use it with older versions of TRITON AP-DATA.

Similarly, TRITON AP-DATA v8.3 does not support older versions of the Email Gateway for Office 365.

Known issues

A list of known issues is available in the [Forcepoint Knowledgebase](#). You must log on to My Account to view the list.
