

# Forcepoint DLP Language Support

Language Support | Forcepoint DLP | v8.4.x, v8.5.x, v8.6.x

Forcepoint DLP can detect content in a wide variety of languages.

The exact languages supported varies by component, and the level of support varies by language.

- Fingerprinting supports all languages in the table below.
- Custom dictionaries support all languages in the table below.
- Machine learning is language-agnostic except for Chinese, Japanese, and Korean.
- The languages supported by the OCR server depend on whether the OCR language pack is installed. See [Installing the Language Pack](#) for a list of default languages, available languages, and language pack installation instructions.
  - Users of Forcepoint DLP version 8.6 do not need to install a separate language pack, due to changes to the OCR server in this version. All of the languages in the table below are supported in Forcepoint DLP version 8.6 as indicated.

Language	Machine Learning	Acceptable Use Dictionaries	PII Policy	PHI Policy
