# Upgrading data endpoints to v8.5.x

Review the v8.5 Release Notes prior to upgrade

**START**

My Data Security deployment is currently functional.

**YES**

**NO**

**NO**
Unless otherwise instructed by Technical Support, please ensure your system is functional prior to upgrading, then return here.

I have already upgraded the Data Security management server to v8.5.x.

**NO**

**YES**

The v8.5.x package builder and classifiers are already included inside the management server.

Continue below.

Version 8.5 endpoints can work with older management servers; however, endpoint features that were added after the manager release won't work. Version 8.5 endpoints support managers from v7.8.4 – v8.5.

For best practice, upgrade the management server to v8.5, then return here.

Log on to [My Account](), and download the v8.5.x package builder from the Forcepoint Downloads page.

Unzip **EndpointPackage85.zip** to the following Windows directory:
For Forcepoint DLP Endpoint: C:\Program Files (x86)\Websense\Data Security\client
For combined Forcepoint DLP Endpoint /Forcepoint Web Security Endpoint solutions: C:\Program Files (x86)\Websense\Web Security\DTFAgent\RemoteFilteringAgent Pack

**(Cont.)**

**(Cont.)**

**YES** → I have upgraded the Data Security management server to v8.5.x. → **NO** →

Is your endpoint running on Windows, Linux, or Mac?

**Note**: You can select multiple operating systems, and separate packages will be created.

**Windows** ← | → **Mac**

**Linux** ↓

I have upgraded the Data Security management server to v8.5.x. → **YES**

**NO** ↓

For Windows 32-bit systems, copy the new EPA.msi file to C:\Program Files (x86)\Websense\Data Security\client

For Windows 64-bit systems, copy the new EPA64.msi file to C:\Program Files (x86)\Websense\Data Security\client

Run **WebsenseEndpointPackage Builder.exe**, select Linux when prompted, and complete the wizard to generate the endpoint software package.

Copy the new **WebsenseEPClassifier.pkg.zip** into the \OS X folder.

You do not need to unzip this file.

↓

Run **WebsenseEndpointPackage Builder.exe**, select either Windows 32-bit or 64-bit when prompted, and complete the wizard to generate the endpoint software package.

Copy the installer **TRITONAP-ENDPOINT_Linux_el5** to the machine and run it as root. You can install v8.5.x on top of older versions without uninstalling and re-installing them. When the upgrade is complete, the endpoint software starts automatically. No reboot is necessary.

Run **WebsenseEndpointPackage Builder.exe**, select Mac OS X when prompted, and complete the wizard to generate the endpoint software package.

↓

Deploy the v8.5.x package to each endpoint using GPO, SMS, or a similar deployment method. You can install v8.5.x on top of earlier versions without uninstalling and re-installing them.

Copy the **TRITONAP-ENDPOINT_Mac.zip** file to each endpoint machine. Double-click **WebsenseEndpoint.pkg** from the zip file to start the installation process. You can install v8.5.x on top of earlier versions without uninstalling and re-installing them.

↓

Restart the endpoint after installation is complete.

**Congratulations! Data endpoint upgrade complete.**

**END**

End users may be prompted to log off and back on to their desktops.
