

Forcepoint DLP Language Support

Language Support | Forcepoint DLP | v8.4.x, v8.5.x, v8.6.x, v8.7x

Forcepoint DLP can detect content in a wide variety of languages.

The exact languages supported varies by component, and the level of support varies by language.

- Fingerprinting supports all languages in the table below.
- Custom dictionaries support all languages in the table below.
- Machine learning is language-agnostic except for Chinese, Japanese, and Korean.
- The languages supported by the OCR server depend on whether the OCR language pack is installed. See [Installing the Language Pack](#) for a list of default languages, available languages, and language pack installation instructions.
 - Users of Forcepoint DLP version 8.6 and 8.7 do not need to install a separate language pack.
