START

My Data Security deployment is currently functional.

YES

NO

Unless otherwise instructed by Technical Support, ensure your system is functional prior to upgrading, then return here.

I have already upgraded the Data Security management server to v8.7.x.

NO

YES

NOTE: The v18.12.x package builder and classifiers are already included inside the management server.

Continue below.

(Cont.)

Version 18.12.x endpoints can work with some older management servers; however, endpoint features that were added after the manager release won't work. Version 18.12.x endpoints support managers from v8.4 – v8.7.x.

For best practice, upgrade the management server to v8.7.x, then return here.

Log on to [My Account](#), and download the v18.12.x package builder from the Endpoint section of the Forcepoint Downloads page.

Unzip **ForcepointOneEndpointPackage.zip** to the following Windows directory:
For Forcepoint One Endpoint (DLP):
C:\Program Files (x86)\Websense\Data Security\client
For combined Forcepoint DLP Endpoint /Forcepoint Web Security Endpoint solutions:
C:\Program Files (x86)\Websense\Web Security\DTFAgent\RemoteFilteringAgentPack

(Cont.)

Is your endpoint running on Windows or Mac?
Note: You can select multiple operating systems, and separate packages will be created.

Windows →

Mac →

YES ← **I have upgraded the Data Security management server to v8.7.x.**

NO ↓

For Windows 32-bit systems, copy the new EPA.msi file to %DSS_HOME%\client

For Windows 64-bit systems, copy the new EPA64.msi file to %DSS_HOME%\client

↓

Run **WebsenseEndpointPackage Builder.exe**, select either Windows 32-bit or 64-bit when prompted, and complete the wizard to generate the endpoint software package.

↓

Deploy the v18.12.x package to each endpoint using GPO, SMS, or a similar deployment method. You can install v18.12.x on top of earlier versions without uninstalling and re-installing them.

↓

Restart the endpoint after installation is complete.

I have upgraded the Data Security management server to v8.7.x. **YES**

NO ↓

Copy the new **FORCEPOINT-ONE-ENDPOINT_Mac.zip** file into the \OS X folder.

You do not need to unzip this file.

↓

Run **WebsenseEndpointPackage Builder.exe**, select Mac OS X when prompted, and complete the wizard to generate the endpoint software package.

↓

Copy the **FORCEPOINT-ONE-ENDPOINT_Mac.zip** file to each endpoint machine. Double-click **WebsenseEndpoint.pkg** from the zip file to start the installation process. You can install v18.12.x on top of earlier versions without uninstalling and re-installing them.

↓

End users may be prompted to log off and back on to their desktops.

Congratulations! Data endpoint upgrade complete.

END
