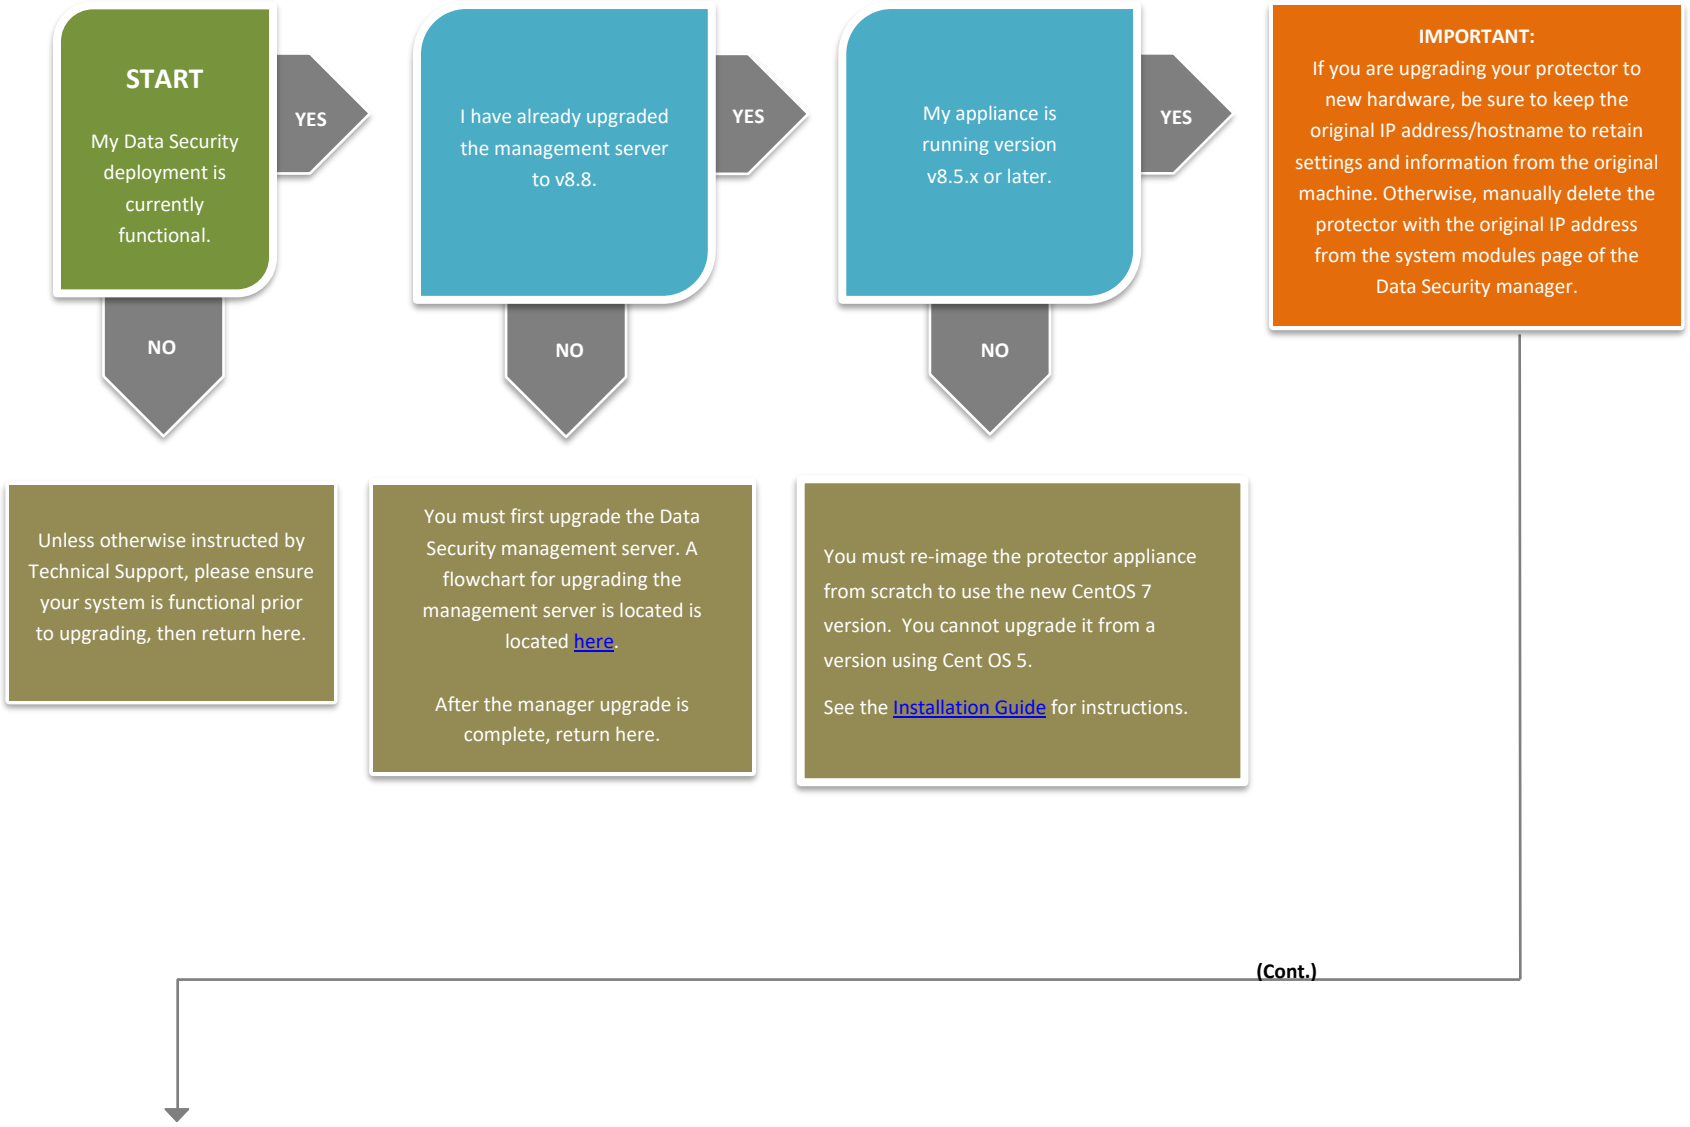
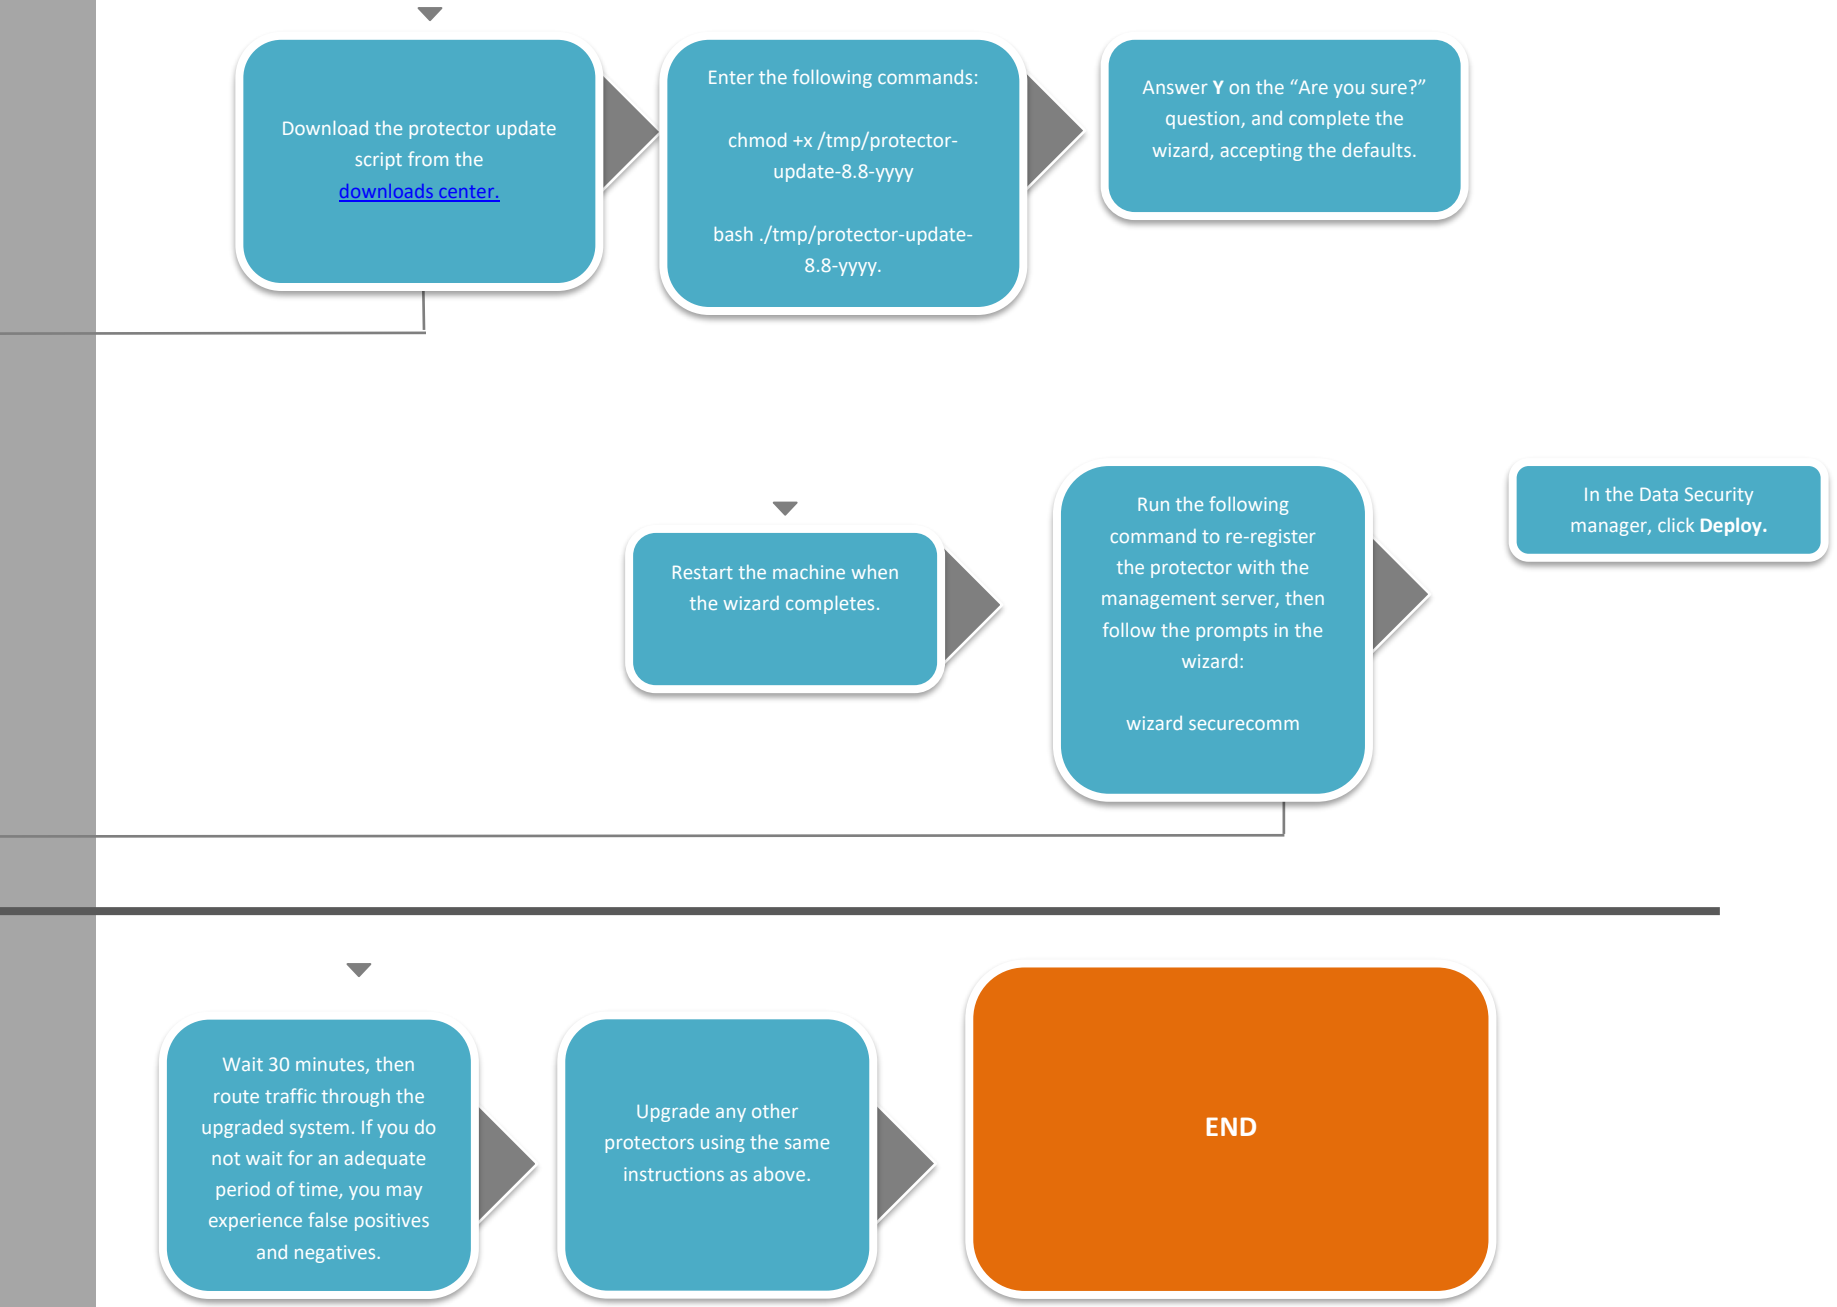
Upgrading the protector to v8.8

Review the v8.8 Release Notes prior to upgrade

BEFORE UPGRADE





Download the protector update script from the downloads center.
Enter the following commands:
chmod +x /tmp/protector-update-8.8-yyyy
bash ./tmp/protector-update-8.8-yyyy.
Answer Y on the “Are you sure?” question, and complete the wizard, accepting the defaults.
Restart the machine when the wizard completes.
Run the following command to re-register the protector with the management server, then follow the prompts in the wizard:
wizard securecomm
In the Data Security manager, click Deploy.
Wait 30 minutes, then route traffic through the upgraded system. If you do not wait for an adequate period of time, you may experience false positives and negatives.
Upgrade any other protectors using the same instructions as above.
END
