

2014 Release 6 Notes for Websense® Cloud Email Security

Updated: 16-October-2014

Applies To:	Websense Cloud Email Security, 2014 Release 6
--------------------	---

2014 Release 6 provides a number of important corrections for Cloud Email Security customers.

- ◆ *[Resolved issues in this release](#)*
- ◆ *[Technical Support](#)*

Resolved issues in this release

The following issues have been resolved in this release.

- ◆ In the updated portal user interface, the bulk upload of end users did not work correctly in Internet Explorer.
- ◆ In the updated portal user interface, the bulk selection of end users on the **Account > End Users** page did not work correctly in Internet Explorer 8.
- ◆ If an IP address starting with a zero is entered in the portal, the leading 0 is now stripped when the information is saved.
- ◆ The Directory Synchronization Client was reporting a 403 Forbidden error during a synchronization attempt. This has been fixed.
- ◆ The EUMR subscriptions list page in the portal was showing Account Summary reports and other email reports in addition to the EUMR. Editing these entries displayed the EUMR subscription page with the recipient address left as blank.
- ◆ The Time Zone drop-downs on the **Email > Notification Email** page were appearing behind the popup window instead of in front.
- ◆ If the landing page was set in the new-style portal and you then chose to log on to the legacy version of the portal, the resulting landing page was incorrectly rendered.
- ◆ Inbound email reports in the new-style portal did not offer the option to select specific hours.
- ◆ The Account Summary report now applies only to Cloud Email Security reports.
- ◆ When creating a new inbound mail routing rule, the portal was returning inaccurate error messages.
- ◆ Customizing the notification email message in Spanish was returning an error.
- ◆ EUMR subscription details could not be changed for one user with a large number of subscribed email addresses.
- ◆ Recipient validation was not working correctly for email addresses starting with a # symbol.
- ◆ The TLS status check for inbound routes on the Connections tab was sending test email to the IP address or hostname specified in the connection rather than the email address defined on the page.
- ◆ The page presented to end users to release an ad-hoc encrypted message has been updated to match the new-style portal.

Technical Support

Websense provides technical information about Websense products online 24 hours a day, including:

- ◆ latest release information
- ◆ searchable Knowledge Base
- ◆ show-me tutorials

- ◆ product documents
- ◆ tips
- ◆ in-depth technical papers
