2014 Release 5 Notes for Websense® Cloud Email Security

Updated: 2-September-2014

Applies To:	Websense Cloud Email Security, 2014 Release 5

2014 Release 5 updates the portal look-and-feel and navigation. This change is available from mid-September and is covered by separate release notes. This document covers stage 2 of the release, available from mid-October 2014, which provides a small number of important corrections for Cloud Email Security customers.

Resolved issues in this release

The following issues have been resolved in this release.

New HTML parsing implemented

If HTML content in an email message contains a style block, which does not hide the content as a comment, then the style block is corrupted. This can result in the whole of the HTML content not being shown if viewed within Microsoft Outlook.

The new HTML parsing module implemented in this release handles this issue, while taking into account policy sensitivity to ensure messages are delivered or quarantined according to your settings.

High memory usage

Blank lines in a quarantined message header were causing high memory usage.

Permissions issue for policies

Administrators could not see all details or make per-user antispam changes in a policy for which they had permissions.

Technical Support

Websense provides technical information about Websense products online 24 hours a day, including:

- ◆ latest release information
- ◆ searchable Knowledge Base
- ◆ show-me tutorials
- ◆ product documents
- ◆ tips
- ◆ in-depth technical papers
