Exchange 2007 Journaling Guide

This guide explains the Journaling process for users of Exchange 2007.

What is Journaling?

Emails appear in the Archive via Journaling. Journaling is an operation on a Customer's mail server that collects all email– inbound, outbound and internal– and automatically and securely forwards a copy to the Archive.

Journaling does not capture existing messages stored in users' active mailboxes: it only captures new messages. As journaling captures new messages "in flight," users cannot alter nor delete email before it is archived.

Also, journaling does not capture miscellaneous items like contacts, calendar items or tasks. Consequently these items will not be saved in the Archive.

Envelope versus Standard

In Exchange 2000 and 2003, the default method to capture messages sent to and from users ("Standard Journaling") does not capture all message header content like BCC recipients or distribution lists. As a result, later Exchange versions contain applications to capture this additional message information.

The new method to capture messages ("Envelope Journaling") forwards a single email to the Archive as an envelope with two parts: a report of message recipient information and the actual message (which becomes an attachment). Envelope Journaling associates all users with a message, including CC and BCC recipients and members of distribution groups. All envelope information is saved in the Archive.

By default, Exchange 2007 Journaling is Envelope format.

Message Size Limit

Message size limit is currently 50MB for the Cloud Archive and 20MB for AdvisorMail. If you are dual-journaling to both Archives, your message size limit is 20MB. Oversized messages sent via journaling cannot be saved in the Archive. If an email is oversized because of its attachments, neither the message nor the attachments will be archived.

Journaling Prerequisites

The following permissions and Microsoft Exchange components are required to configure Journaling for Exchange 2007.

Exchange Server Prerequisites:

- 1. Fully configured installation of Exchange
- 2. Administrator access to the server

Set Up the Journaling Process

There are 2 ways to configure Journaling on your Exchange 2007 server:

To set up message journaling for all email addresses, follow these steps:

- 1. Create a Journaling Contact
- 2. Create an SMTP Send Connector
- 3. Activate Journaling
- 4. Disable NDRs (Non-delivery Reports)

To set up message journaling for select email addresses, follow these steps:

- 1. Create a Journaling Contact
- 2. Create an SMTP Send Connector
- 3. Create a Distribution Group and Add Members (Select Users Only)
- 4. Implement Journal Rules (Select Users Only)
- 5. Disable NDRs (Non-delivery Reports)

Create a Journaling Contact

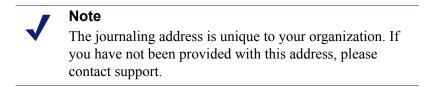

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Click the + sign to the left of Recipient Configuration.
- 3. Click Mail Contact under Recipient Configuration.
- 4. In the Actions pane, click New Mail Contact.
- 5. Select the New Contact option and then click Next.

6. In the New Mail Contact window, type Journaling in the **First Name** field, Contact in the **Last Name** field and Journaling Contact in the **Alias** field (a). Click **Edit** (b).

New Mai	I Contact
 Introduction Contact Information New Mail Contact Completion 	Contact Information Enter the account information that is required to create a new mail contact or to mail-enable an existing mail contact. Organizational unit: corp.contoso.com/Users

- 8. Click Next.
- 9. Click New.
- 10. Click Finish.

You have successfully created a journaling contact as shown below.

Create an SMTP Send Connector

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Click the + sign to the left of Organization Configuration.
- 3. Click Hub Transport.
- 4. Click the Send Connectors tab.
- 5. In the Actions pane, click New Send Connector.

6. Type Journaling Connector for the **Name** and for the **Select the intended use for this Send connector** drop-down list, select **Custom** (a). Click **Next** (b).

New SMT	TP Send Connector
	Introduction
Address space	This wizard helps you create a new SMTP Send connector on the selected Exchange server. To configure properties not shown in this wizard, in the Exchange Management

Пар	

- 7. Click New.
- 8. Click Finish.

You have successfully created a distribution group as shown below.

Add the users whose emails you want journaled to the Journaling Distro distribution group.

Implement Journal Rules (Select Users Only)

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Click the + sign to the left of Organization Configuration.
- 3. Click Hub Transport.
- 4. In the Actions pane, click New Journal Rule.
- 5. In the New Journal Rule window, type Journaling Rule in the **Rule Name** field (a). Click **Browse** (b).
- 6. Select Journaling Contact from the list (a) and then click OK (b).
- 7. Select the Journal messages for recipient check box (a). Click Browse (b).
- 8. Select Journaling Distro from the list (a) and then click OK (b).
- 9. Click New.

10. Click Finish.

You have successfully implemented journal rules for select users in your organization.

Disable NDRs (Non-delivery Reports)

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Click the + sign to the left of Organization Configuration.
- 3. Click Hub Transport.
- 4. Click the **Remote Domains** tab.
- 5. In the Actions pane, click New Remote Domain.

6. Enter a name for the remote domain in the **Name** field (a). Enter the domain name of the Address Space provided to you in the **Domain name** field (b). Click **New** (c).

New Rem	ote Domain
 New Remote Domain Completion 	New Pennote Domain When you create a remote domain, you can control mail flow with more precision, apply messages formatting and messaging policies, and specify acceptable character sets for messages that are sent to and received from the remote domain. After you create a remote domain, you can specify more advanced security, policy, and permission configurations for essages that you exchange with the remote domain. Name: Enter Remote Domain Description Here Domain name: Include all subdomains
Help	< Back New Cancel

7. Click Finish.

8. In the **Remote Domains** tab, right click the Address Space Domain and select **Properties**.

You have successfully disabled NDRs.

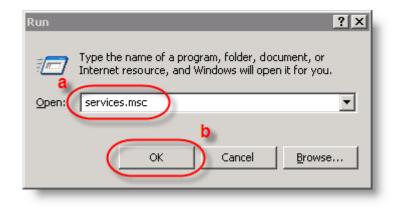

Note

Your Journaling set up is now complete. If you encounter any problems with the journaling process, or if journaling stops, please refer to the *Troubleshooting Tips* below. If journaling stops for an extended period of time, we cannot recover lost email.

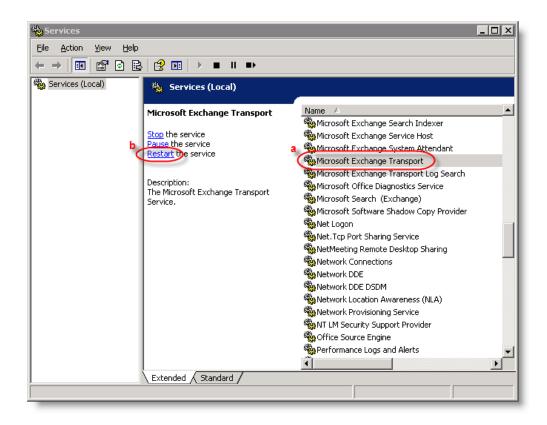

Troubleshooting Tips

• Make sure the Journaling Contact SMTP Email Address (journal address provided to you) is spelled correctly

- Restart the Microsoft Exchange Transport Service.
 - a. Click Start and then click Run.
 - b. Type services.msc in the text box (a) and then click OK (b).

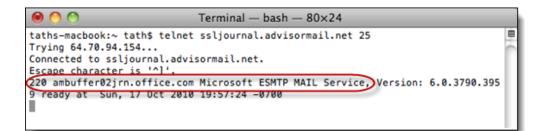

c. Locate and click the **Microsoft Exchange Transport** service (a) and then click **Restart** (b).

A pop-up window will display with the message "Microsoft Exchange Transport service is being restarted." When the pop-up window automatically disappears, you have successfully restarted the service.

• Your firewall may be blocking outbound emails.

- a. Many firewalls can block emails sent using TLS encryption, even if they are set to allow all outbound emails.
- b. If you have a Cisco firewall, chances are very high that the ESMTP packet inspection is enabled and blocking the TLS-encrypted emails. For more information, visit Cisco support by clicking on the link below or copying and pasting it into your web browser. <u>http://www.cisco.com/en/US/docs/security/asa/asa72/release/notes/asarn723.html#wp219670</u>.
- Verify there are no enabled Send Connectors utilizing the domain name of the contact being journaled to. Get-SendConnector | Where {\$_.AddressSpaces match "domain.com" If you get a match on one, then there is a send connector handling that domains email.
- Check if you are having a connection issue.
 - a. Issue telnet to smarthost (i.e. telnet ssljournal.advisormail.net 25) this should return a 220 banner, seen in the figure below.

- If emails are journaling, but some or all emails seem to archive incorrectly, check the following:
 - Add domain.com (shown on address space of send connector) to the remote domain tab under Organization Configuration > Hub Transport.
 - b. Click on the Format of original message sent as attachment to journal report tab.
 - c. On Exchange rich-text format select the Never use option.

Journaling Best Practices

- Contact Archiving Support if you make any changes to your host provider or upgrade your Exchange Server. You will be provided new setup instructions to update your journaling configuration.
- Monitor your Exchange Server for issues.
- When adding or deleting a user mailbox on your Exchange Server, make sure you also update that user in the Archive Administration tab.
- Make sure you hide the journal recipient(s) from your Global Address List (GAL).

- Envelope Journaling using journaling rules
 - a. When journaling rules are implemented under the Hub transport, exchange transport agent is executed first and can conflict with messages being archive (if there's transport rules to drop messages). You need to set the journaling agent as first priority using the steps below. Once this is set even messages that are meant to drop will be archived.
 - b. Open EMS.
 - c. Set-transport agent: identity is "journaling agent," priority is "1".
 - d. Restart services (services.msc) for MSExchangeTransport or via a Command window by typing net stop msexchangetransport & net start msexchangetransport.
- I want to journal all messages on my Exchange server, but do not want to enable journaling on each mailbox store.

a. Create a new journaling rule, seen in the figure below.

- b. On Send journal reports to e-mail address, click **Browse** to select a contact.
- c. Select Global all messages.
- d. Ensure the **Journal messages for recipient** option is deselected. Selecting this will journal all messages for all users for the entire Organization.
- Verify the journaling mailbox is set to allow mail only from Microsoft Exchange and Authenticated Senders Only.

a. Set-Mailbox <Journal Mailbox Name> -AcceptMessagesOnlyFrom "Microsoft Exchange" –RequireSenderAuthenticationEnabled:\$true

Remove Exchange 2007 Journaling setup

There are 2 ways to remove Exchange 2007 Journaling setup:

Remove Exchange 2007 Journaling setup for all users, follow these steps:

- 1. Remove Address Space Domain
- 2. Deactivate Journaling
- 3. Remove the SMTP Send Connector
- 4. *Remove the Journaling Contact*

Remove Exchange 2007 Journaling setup for select users, follow these steps:

- 1. Remove Address Space Domain
- 2. Remove Journal Rule
- 3. Remove the Distribution Group
- 4. Remove the SMTP Send Connector
- 5. Remove the Journaling Contact

Note

Only complete the above steps if you wish to stop sending email to the Archive. Once you remove the journaling setup, email cannot be saved in the Archive.

Remove Address Space Domain

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Organization Configuration.
- 3. Select Hub Transport.
- 4. Select the **Remote Domains** tab.
- 5. Right click Address Space Domain and then select Remove.
- 6. Click Yes to confirm.

You have successfully removed the Address Space Domain.

Deactivate Journaling

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Server Configuration.
- 3. Select Mailbox.
- 4. Within the Database Management section, right-click your mailbox database and select **Properties**.
- 5. Within the **General** tab, deselect the **Journal Recipient** check box and then click **OK**.

You have successfully deactivated journaling.

Remove Journal Rule

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Organization Configuration.
- 3. Select Hub Transport.
- 4. Select the **Journaling** tab.

5. Select the Journal Rule whose Journal Email Address, from within the list, that matches the journaling address used during the journaling setup (a) and then select **Remove** in the right-hand Actions pane (b).

6. Click **Yes** in the resulting confirmation dialog box.

You have successfully deleted the Journal Rule.

Remove the Distribution Group

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Recipient Configuration.
- 3. Select Distribution Group.

4. Select the distribution group for the journaling setup you are deleting (a), from within the list, and then click **Remove** in the Actions pane (b).

5. Select **Yes** in the resulting confirmation dialog box.

You have successfully deleted the Journaling Distribution Group.

Remove the SMTP Send Connector

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Organization Configuration.
- 3. Select Hub Transport.
- 4. Select the Send Connectors tab.
- 5. Your Send Connectors display in a list. To find the Send Connector associated with your journaling setup, follow these steps:
 - a. Right-click a **Send Connector**, from within the list, and then select **Properties**.

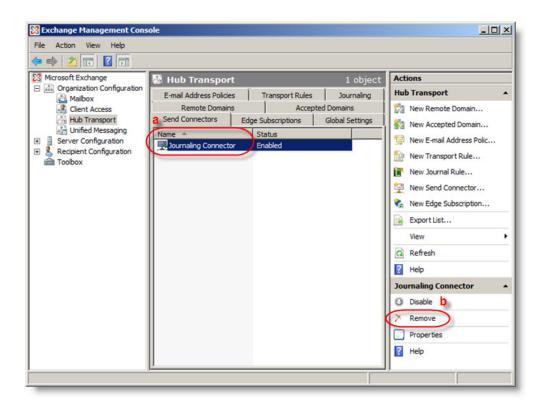

b. Select the Address Space tab, within the Journaling Connector Properties dialog box. If the address listed (a) matches the Address Space used during the journaling setup, this Send Connector must be deleted. Select **Cancel** (b) to close the dialog box.

Note

If the address listed does not match the Address Space used during the journaling setup, repeat the above steps.

6. Select the Send Connector that needs to be deleted, from within the list (a), and then select **Remove** in the right-hand Actions pane (b).

7. Select Yes on the resulting warning dialog box.

You have successfully deleted the SMTP Send Connector.

Remove the Journaling Contact

- Open the Exchange Management Console window by selecting Start > All Programs > Microsoft Exchange Server 2007 > Exchange Management Console.
- 2. Select the + sign to the left of Recipient Configuration.
- 3. Select **Mail Contact**, within the Recipient Configuration node. Your Mail Contacts display in a list.

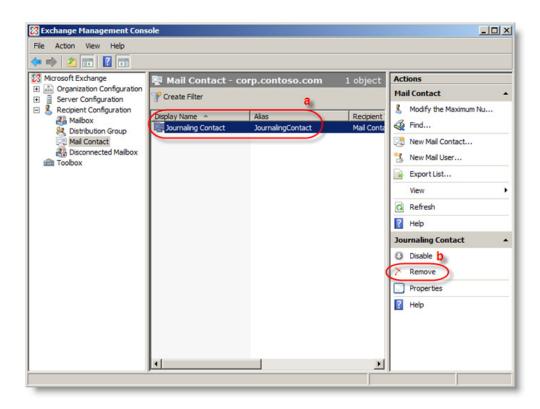

- 4. To find the Mail Contact associated with your journaling setup, follow these steps:
 - a. Right-click a Mail Contact, from within the list, and select Properties.
 - b. Select the Email Addresses tab. If the external email address (a) matches the Journaling Address used during the journaling setup, this Mail Contact must be deleted. Select Cancel (b) to close the dialog box.
