What's new in TRITON Mobile Security?

Topic 42518 / Updated: 14-Sep-2012

Applies To:	TRITON Mobile Security

◆ *Export to PDF or Excel*
◆ *Email notifications* for significant events
◆ *iOS 6 support*

Export to PDF or Excel

You can now export the information on the installed apps page to a PDF or Microsoft Excel spreadsheet. Use this information to assess risk when a device is lost. Once you know the apps installed on the device, you can generate reports on app usage. (Use the reporting functions of your Web Security product.)

To view installed apps, click the name of a device on the **General** > **Devices** page to view and edit device details.

Click the **Applications** tab of the **Devices** > **Edit Device** page.

To request updated application information from the device, click **Update Device Applications** (this information is automatically updated once per day when the device is available).

Click **Export to PDF** or **Export to Excel** to create a printable installed apps report.

Email notifications

When someone performs a significant action on a mobile device, the device owner and an administrator are now notified by email. Significant actions include:

- the device is wiped and restored to factory settings
- the device is locked and requires a passcode
- a Websense profile is deleted from the device

When a device is wiped or a profile is removed, the device is no longer registered with the Mobile Security system.

Administrators are told details about the device and given access to the Cloud Security portal when remediation action is required.

iOS 6 support

Previously, TRITON Mobile Security supported all Apple iPhone and iPad models running iOS v4.3.5 or iOS v5. iOS 6 is now supported as well.

Resolved and known issues

Topic 42519 / Updated: 14-Sep-2012

Applies To:	TRITON Mobile Security

A list of resolved and known issues is available in the Technical Library. You must log on to MyAccount to view the list.
