

v8.1.0 Release Notes for TRITON® RiskVision

Release Notes | v8.1.0 TRITON RiskVision | 13-January-2016

These INTERNAL release notes are for Sales Engineers (SEs) who use v8.1.x TRITON RiskVision appliances with TRITON AP-WEB for proof-of-concept (PoC) engagements. v8.1.0 TRITON RiskVision is a proprietary PoC tool for SEs and qualified partners.

- ◆ v8.1.0 TRITON RiskVision requires V10000 G2R2 or V5000 G2R2 and higher appliances.
- ◆ Off-appliance machine and software requirements, and installation and configuration procedures are largely the same as with v7.8.x TRITON RiskVision.
- ◆ The [TRITON RiskVision Setup Guide](#) is the go-to guide for installation and configuration details. SEs familiar with installation and configuration can use section 2, “Installation and Configuration Summary,” as a quick start checklist.

If you are upgrading a v7.8.x TRITON RiskVision deployment to v8.1.0, you must:

1. Reimage the appliance and run firstboot.
2. Upgrade or fresh install the TRITON management server. See the aforementioned Setup Guide.
3. Check and adjust configuration settings.

For information about transitioning a v8.1.x TRITON RiskVision deployment to full TRITON AP-WEB, see the KBA titled [v8.1.x RiskVision for PoCs](#).
