Release Notes for Websense Endpoint v7.8.4.1921

Topic 43016 | Updated 26-Aug-2014

Applies To:	◆ Websense Web Filter, Web Security, Web Security Gateway, and Web Security Gateway Anywhere
	◆ Websense Data Security

Version 7.8.4.1921 is a Websense Endpoint Package release that fixes a known issue for Windows-based Data Endpoint clients (V7.8.4.1918). It applies to customers who have deployed Data Endpoint alone, or combined with Web Endpoint or Remote Filtering Client.

Issue description and resolution

In build 7.8.4.1918, if the "Confirm" action is selected for any channel and the content scanning takes longer than the Analysis Timeout value for the channel, then the action applied is "Permit". (The analysis time out value for each channel is specified in Data Security Supported File Formats and Size Limits.)

In 7.8.4.1921, in the same scenario, the action applied is the one specified under the "Endpoint Global Properties" (Block or Permit).

> ✔ **Note**
> This issue applies to Windows endpoints only. Mac endpoints do not encounter this issue.

If you are not concerned about the Confirm action behavior, or if you have not deployed Data Endpoint 7.8.4.1918, there is no reason to install v7.8.4.1921.
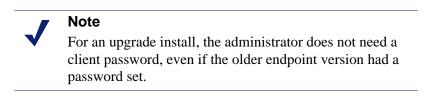

Installation and upgrade

Topic 43018 | Updated 026-Aug-20134

Applies To:	◆ Websense Web Filter, Web Security, Web Security Gateway, and Web Security Gateway Anywhere
	◆ Websense Data Security

1. Make sure you have a v7.8.4 TRITON management server installed and functioning.

2. Download the new v7.8.4.1921 package builder from MyWebsense. The package includes the following file: **WebsenseEndpointPackageBuilder.exe**.

3. Make a backup copy of the Endpoint Package Builder executable file found in C:\Program Files or Program Files(x86)\Websense\Data Security\client.

4. Replace the executable file there with the one from this hotfix.

5. Run **WebsenseEndpointPackageBuilder.exe** to generate a new endpoint client installation package.

6. Deploy the v7.8.4.1921 installation package to each endpoint client using one of the following methods:

   - Manually on each endpoint device
   - Using System Center Configuration Manager (SCCM) or Systems Management Server (SMS)
   - Using a Microsoft Group Policy Object (GPO) or other third-party deployment tool for Windows

   You do not need to uninstall earlier endpoint versions before installing v7.8.4.1921.

   > ✔ **Note**
   > For an upgrade install, the administrator does not need a client password, even if the older endpoint version had a password set.

7. Restart the endpoint software after installation is complete.

For more detailed information on completing the Websense Endpoint Package Builder wizard and deploying endpoint software, see Installing and Deploying Websense Endpoint Clients.
