

Web Security **Save-Me-Time** Tips

Topic 50100 / Updated: 1-June-2011

Applies To:	Web Filter, Web Security, Web Security Gateway/ Anywhere Version 7.6
--------------------	---

- © New Websense password is **admin**
- © **Before** upgrade, disable MSDE
- © **Turn off** Compatibility View for IE 8
- © **Install on a domain server:** do not use Workgroup server
- © **Domain privileges** are required
- © Set User Account Control (UAC) to **Never notify**
- © Download and use **TRITON unified installer**
- © **SQL Services must be running:** After TRITON Infrastructure install ["Finish" button appears], **ensure SQL services are running** (SQL Server, SQL Server Browser).
Go to Services utility. SQL Server Browser service is disabled by default: display properties, set manual or automatic, then start it. Then proceed with installation.
- © **To reference SQL Server by IP address** (preferred):
Start > All Programs > Microsoft SQL Server 2008 R2 > Configuration Tool > SQL Configuration Manager
In left panel, select SQL Server Network Configuration > Protocols and **enable TCP/IP**. Restart SQL Server.
- © **Disable firewall:**
Access firewall on Server Manager panel. On Windows Firewall with Advanced Security Properties, notice 4 tabs – modify first 3.
On each tab, notice drop-down where you can select Off – before selecting Off, notice 2 text fields that allow you to select Allow or Block – set both settings to **Allow**, then turn the firewall state to **Off**.
